

PANNEX AG among the 25 most eco-friendly enterprises at Automechanika

Eco-friendly tire sealant PANNEX listed in Green Directory

More than 4,000 companies exhibit their products at Automechanika tradeshow, while PANNEX AG is among the 25 most eco-friendly ones. The brand new powerful and easily biodegradable PANNEX-tire sealant has been listed in the Green Directory in the category “car accessories”.

Green Directory enhances environmental consciousness

Environmental protection and a sustainable handling of resources become more and more important. Thus, Automechanika provides a Green Directory, listing only exhibitors whose products offer an outstanding ecological contribution.

Due to the fact that the PANNEX-tire sealant is made of biodegradable components only, it is unique in this market segment. This was an important reason for being listed in the Green Directory.

More eco-friendliness and less hazardous waste

Many tire sealants in the market cause hazardous waste: They are based on latex- or caoutchouc components in a mix of toxic chemical compounds. Usually these tire sealants need to be depolluted as hazardous waste. A tire contaminated with these products cannot be recycled anymore – so it is a loss for the total recycling process.

With PANNEX a totally eco-friendly product is added to the market for tire sealants. The brand new product seals leaks up to 8 mm and is easily biodegradable. Specially developed microfibrils cater for environmental compatibility and offer other advantages, e.g. a longer storage life of 10 years.

Improved life cycle assessment in the tire sealant market

A tire treated with PANNEX can be recycled regularly. If the damaged tire is repairable, it can be re-used. Thus, PANNEX reduces resource waste and significantly improves the life cycle assessment in the market for tire sealants.

PANNEX AG is convinced to essentially change the market for tire sealants in the near future.
