

Pannex AG wins Partslife Environmental-award 2015

In June 2015 the environmental consulting company Partslife awarded its famous environmental awards to aftersales market companies.

Regularly products, services and projects with special eco-friendly impact are selected. This year the powerful and eco-friendly PANNEX tire sealant was awarded with the Environmental award 2015.

The jury, composed of designated car aftersales-market experts, had a complex decision to do.

PANNEX AG received the award for PANNEX, its powerful tire sealant, based on microfibre. The product can be pumped into the tire easily, then sealing damages up to 8 mm of size. Different to conventional tire sealants PANNEX is eco-friendly and easily bio degradable as well as completely odorless. In addition after application of PANNEX a repairable tire can be reused, what is not possible for sealants based on latex or made of pure chemicals only. This approach completely convinced the jury.

During the handover ceremony Fabian Hagen, CEO of PANNEX AG, underlined, that the industry, garages and workshops can support saving thousands of tons of toxic waste, when consequently applying PANNEX tire sealant. Further tens of thousands of tires can be kept inside the recycling-process or can be used longer.

After winning the Innovation Award in 2014 PANNEX AG is happy to win another important price with the innovative product.
